

Amendments to the Claims:

This listing of claims replaces all prior listings, and versions, of claims in the present application.

Listing of Claims:

1-22. (Canceled)

23. (Currently Amended) A ~~mobile telecommunications~~ device comprising:

a controller;

a keypad, operably coupled to the controller to receive for receiving data from a user;
and

a transceiver, operably coupled to the controller to send and receive wireless for sending
and receiving signals via a wireless telecommunications network and a controller; and

wherein the controller is further capable of being configured operable to execute a
browser application, to receive a search term for a search engine offline, to receive information
identifying a search engine to carry out a search using said search term, and to receive an
instruction to carry out a search, ~~the controller being operable, thereafter,~~ to establish a
connection with a server associated with the search engine ~~via the wireless communications~~
~~network~~, to transmit said search term to the server, and to receive search engine results based on
said search term from the server.

24. (Currently Amended) The device of claim 23, further comprising:

a display, operably coupled to the controller; and

wherein the controller being is further capable of being configured operable to present a
list of predefined links on said display and to receive a command selecting one predefined link
from said list of predefined links.

25. (Currently Amended) The device of claim 23, further comprising a display, operably coupled to the controller, and the controller being further capable of being configured operable-to present a list of predefined links on said display and to receive a command for selecting a plurality of predefined links from said list of predefined links.

26. (Currently Amended) The device of claim 23, wherein the controller is capable of being configured operable-to receive information identifying a plurality of search engines to carry out a search using said search term, and, thereafter, for each respective search engine, capable of being configured operable-to establish a connection with a server associated with the search engine, to transmit said search term to the server and to receive search engine results based on said search term from the server.

27. (Currently Amended) The device of claim 23, further comprising:
a display, operably coupled to the controller; and
wherein the controller being is further capable of being configured operable-to present search results on the display, the search results including at least one link for accessing a web page.

28. (Previously Presented) The device of claim 23 wherein said device is WAP-enabled.

29. (Canceled)

30. (Previously Presented) The device of claim 23 which is a PDA.

31. (Currently Amended) A system comprising:

a server associated with a search engine;
a wireless telecommunications network-system; and
a ~~mobile telecommunications~~ device comprising:

a controller;

a keypad, operably coupled to the controller to receive ~~for-receiving~~ data from a user; and

a transceiver, operably coupled to the controller to send and receive wireless for sending and receiving signals through the [[a]] wireless telecommunications network and a controller,

wherein the controller is further capable of being configured operable to execute a browser application, to receive an instruction to prepare a search, to receive a search term for a search engine offline, to receive information identifying a search engine to carry out a search using said search term, and to receive an instruction to carry out a search, the controller thereafter being operable to establish a connection with the server associated with the search engine through the wireless communications network, to transmit said search term to the server, and to receive search engine results based on said search term from the server.

32. (Previously Presented) The system of claim 31, wherein search engine software is run on said server.

33. (Currently Amended) A method, ~~in a mobile telecommunications device comprising a keypad for receiving data from a user, a transceiver for sending and receiving signals through a wireless telecommunications network and a controller, the method comprising:~~

- (a) —executing a browser application;
- (b) —receiving a search term for a search engine offline;
- (c) —receiving information identifying a search engine to carry out a search using said search term;
- (d) —receiving an instruction to carry out a search;
- (e) —establishing a connection with a server associated with the search engine through the a wireless communications network;
- (f) —transmitting said search term to the server; and
- (g) —receiving search engine results based on said search term from the server, ~~wherein steps (e) to (g) are performed after steps (a) to (d).~~

34. (Currently Amended) ~~A mobile telecommunications device comprising a keypad for receiving data from a user a transceiver for sending and receiving signals via a wireless telecommunications network and a controller; The device of claim 23, wherein the controller being is further configured to:~~

~~execute a browser application;~~

~~receive the [[a]] search term for the [[a]] search engine via the browser application;
wherein the search engine is selected as~~

~~receive information identifying a particular search engine among a plurality of search engines; and to carry out a search for links associated with the search term using said search term; and~~

~~receive an instruction to carry out a search,~~

~~wherein the search results comprise controller is further configured, thereafter, to establish a connection with a server associated with the search engine via the wireless communications network, to transmit said search term to the server and to receive a list of links associated with the search term based on search engine results from the server.~~

35. (New) The device of claim 23, wherein the device is a mobile telecommunications device.

36. (New) The method of claim 33, wherein receiving the search term further comprises receiving the search term via the browser application.

37. (New) The method of claim 33, wherein receiving search engine results comprises receiving a list of predefined links and wherein the method further comprises receiving a selection of one predefined link from the list of predefined links.

38. (New) The method of claim 33, wherein receiving search engine results comprises receiving a list of predefined links and wherein the method further comprises receiving a selection of a plurality of predefined links from said list of predefined links.

39. (New) The method of claim 33, wherein receiving information identifying the search engine comprises receiving information offline identifying a plurality of search engines to carry out a search using said search term, and wherein the method further comprises, for each respective search engine establishing a connection with a server associated with the search engine, for transmitting said search term to the server and receiving search engine results based on said search term from the server.

40. (New) A computer program product comprising a computer readable medium storing instructions for causing a device to execute a browser application, to receive a search term for a search engine offline, to receive information identifying a search engine to carry out a search using said search term and to receive an instruction to carry out a search, and to establish a connection with a server associated with the search engine via a wireless communications network, to transmit said search term to the server and to receive search engine results based on said search term from the server.

41. (New) The computer program product of claim 40, wherein the device is a mobile telecommunications device.

42. (New) The computer program product of claim 40, further comprising instructions for causing the device to receive the search term via the browser application.

43. (New) The computer program product of claim 40, further comprising instructions for causing the device to receive a list of predefined links and to receive a selection of one predefined link from the list of predefined links.

44. (New) The computer program product of claim 40, further comprising instructions for causing the device to receive a list of predefined links and to receive a selection of a plurality of predefined links from the list of predefined links.

45. (New) The computer program product of claim 40, wherein receiving information identifying the search engine comprises instructions for receiving information offline identifying a plurality of search engines to carry out a search using said search term, and further comprising, for each respective search engine, instructions for establishing a connection with a server associated with the search engine, for transmitting said search term to the server and for
